

SUSMILE Capsule 3.2.1

Answers

4th industrial revolution is the term which is usually used for describing the current trend of rapid technology developments, sometimes experts already talk even about the **5th industrial revolution**.

Cyber-physical systems, where the world of ICT is interconnected with the physical objects, people and processes around us, is what makes the current 4th industrial revolution different from the previous developments.

Mass production does not belong among the current trends that shape the future of LMD. Mass production and assembly lines have been here for more than a hundred years.

Constant surveillance does not belong among the positive impacts of the new technology developments on society. It is a risk to the democracy as well as to the mental health of workers if performed in job.

Food shortages do not belong among the current negative impacts of the new technologies on the society. Although they are a serious risk, they are not caused by the new technologies.
